

APL Inclusion – Alternatives

Atlantic House Investments Uncorrelated Strategies Fund APIR: ETL7513AU

Summary

The **Atlantic House Investments Uncorrelated Strategies Fund ('the Fund')** is a multi-strategy, derivatives-focused investment vehicle designed to generate uncorrelated returns across market cycles. The Fund employs a diversified approach across volatility, relative value, and systematic risk premia strategies to deliver attractive risk-adjusted returns with minimal correlation to traditional asset classes.

APL Fit

The Atlantic House Investments Uncorrelated Strategies Fund is a compelling addition to the APL, offering diversification benefits through its low correlation with traditional asset classes. Additionally, the Fund trades across all markets and will often have exposures to markets or positions not regularly seen in other strategies.

By incorporating a blend of volatility, relative value, and risk premia strategies, the Fund enhances portfolio resilience and provides a differentiated return stream. The Fund will fit in the liquid alternative allocation and can be used as an effective risk management/diversification tool in an overall multi manager portfolio.

Fund Overview

- **Manager:** Atlantic House investments
- **Fund Inception Date:** 22/10/2024 (strategy was launched in 2022)
- **Firmwide Assets Under Management:** \$7.8bn (January 2025)
 - **Uncorrelated Strategies Fund:** USD\$518mn (September 2024)
- **Investment Strategy:** The Fund targets absolute returns through a diversified portfolio of derivatives-based strategies, focusing on capturing uncorrelated risk premia across asset classes.
- **Benchmark:** Reserve Bank of Australia cash rate target +4%

BUSINESS

Atlantic House Investments is a specialist asset manager, based in England, with a strong focus on derivatives-based strategies designed to provide institutional and high-net-worth investors with uncorrelated return streams. The firm leverages deep expertise in volatility trading, systematic risk premia, and quantitative portfolio construction to deliver innovative investment solutions. With a commitment to disciplined risk management and cutting-edge research, Atlantic House has built a reputation for offering differentiated strategies that enhance portfolio diversification.

Team

The investment team is led by Portfolio Manager, Tom Boyle, who is supported by group CEO & CIO Tom May as well as Valeriu Trufas. Atchison highlights the team consists of eight investment managers who are all closely aligned and supportive of each other. Tom Boyle is considered less experienced than peers with this marking his first lead PM role, however, Atchison has met with Boyle and considers him to be highly capable investor. Valeriu Trufas is the co-portfolio manager in the strategy and has significant experience in derivatives most recently working as the head of derivative stress testing at Credit Suisse. The broader investment team is considered well resourced with a range of experiences and support functions.

Process

The Fund systematically invests across multi-asset derivative strategies that have the potential to deliver diverse and highly differentiated sources of return. The two primary buckets the manager employs are long volatility strategies and diversifier strategies. Long volatility strategies aim to profit from rising implied or realised volatility and may also function as a hedge against extreme market moves, Diversifier strategies aim to generate positive returns, in normal market conditions, regardless of the direction of the market.

The team will invest in volatility and derivative strategies across components of equities, fixed income, credit, currencies, and commodities. The Fund's major focus is on volatility as an asset and therefore the most common instruments the Fund will invest in are options, futures, and volatility derivatives such as volatility and variance swaps.

The process is systematically driven with a focus on macroeconomic research to gain a deep understanding of market microstructures to help inform the best investment strategies. When a strategy is identified the team uses both historical analysis at a strategy and position level to measure risk over time and evaluate if a strategy performed as expected during a range of different market regimes.

Atchison believes that the multi asset approach to volatility investing employed by the manager sets them apart from other providers who focus solely on equity volatility. Although equity volatility is a more conventional/easier form of volatility to access, a multi asset approach to volatility is extremely important in a world where asset class interconnectedness are more prevalent.

Fees and operational considerations

- **Management Fee:** 1.32%
- **Performance Fee:** 20% a year of any returns the net asset value per share achieves 4% in excess of the Federal Funds overnight interest rate (subject to the net asset value being greater than the high-water mark and the high-water mark adjusted to take account of share dealings).
- **Liquidity:** Daily applications and redemptions.
- **Capacity:** USD\$1bn
- **Minimum Investment:** \$10,000
- **Responsible Entity:** Equity Trustees Limited

Performance

Cumulative Performance (%)

Share Class/ Currency	1 month	3 months	YTD	1 year	Since Launch	
	Perf.	Perf.	Perf.	Perf.	Perf.	Ann.
AUD Class*	0.19	2.71	2.71	N/A	2.71	N/A
A Acc USD	0.34	3.81	-0.74	-0.74	12.15	4.93

*The fund was launched 22 October 2024 so benefited only from a partial month of the underlying Master Fund return

The Fund is in its early stages and has yet to establish a meaningful performance track record. However, Atchison highlights the strategy has been running since 2022 for institutional mandates and has a consistent and uncorrelated return profile.

Atchison has a high level of conviction in the managers ability to deliver returns uncorrelated to traditional markets and act as a diversifier in a portfolio.
